Meet the Doctor

Daniel G. Hoernschemeyer, MD is an assistant professor of orthopaedic surgery. He is a member of the Pediatric Orthopaedic Society of North America. Dr. Hoernschemeyer completed a fellowship in pediatric orthopaedic surgery and spinal deformity at Johns Hopkins University. In addition to serving the general orthopaedic needs of young patients, Dr. Hoernschemeyer and his staff offer specialized care for a full range of pediatric spine problems.

At University of Missouri Children’s Hospital, we want to empower patients and families to engage in their own care. Ask about our scoliosis mentorship program to connect with families for additional support, experiences and friendships.

Posterior Spinal Fusion

Following a Posterior Spinal Fusion, your child will go to the pediatric floor and start their recovery following the Team Integrated Enhanced Recovery (TIGER) protocol. This protocol reduces the length of your hospital stay, improves surgical outcomes and gets your child back to themselves. We set daily goals and expectations for pain control and mobility to help in eliminating post-operative complications.

15-YEAR-OLD male with 63° idiopathic scoliosis. He is an active basketball, football, baseball and soccer player.
