Your Information – Understanding your PHI

Each time you visit or interact with a hospital, physician, or other health care provider, a record of your visit is made. Typically, this record contains your symptoms, examination and test results, diagnoses, treatment, and a plan for future care or treatment. This information, often referred to as your health or medical record, serves as a:

- Basis for planning your care and treatment.

- Means of communication among the many health care providers who contribute to your care.
- Legal document describing the care you received.
- Means by which you or a third-party payer can verify that services billed were actually provided.
- Tool in educating health care providers.
- Source of data for medical research.
- Source of information for public health officials charged with improving the health of the nation.
- Source of data for facility planning and marketing.
- Tool with which we can assess and continually work to improve the care we render and the outcomes we achieve.

Understanding what is in your record and how your PHI is used helps you to:

- Ensure its accuracy.
- Better understand who, what, when, where, and why others may access your PHI.
- Make more informed decisions when authorizing disclosure to others.
